

TOPIC BRIEF:

1. Project Title:

Job Market and Skills Analysis Dashboard

Identifying In-Demand Skills for Future Careers.

2. Business Problem:

The job market is changing rapidly, making it difficult for students, professionals, and organizations to identify which skills are most valuable. This project seeks to analyze job market data to uncover in-demand skills, popular job roles, and hiring trends, enabling better career planning and workforce decisions.

3. Target Audience:

- Students and job seekers
- HR and recruitment teams
- Educational institutions and training providers
- Startup founders and business leaders
- Career counselors and placement cells

4. Dataset(s) Identified:

NAME: future_jobs_dataset

URL: <https://www.kaggle.com/datasets/muqaddasejaz/job-market-and-skills-demand-dataset>

NO OF ROWS: 10,000

NAME OF COLUMNS: 'job_id', 'job_title', 'industry', 'location', 'salary_usd', 'skills_required', 'remote_option', 'company_size', 'posting_date'.

5.Key Business Questions:

- Q1.Which job roles offer the highest average salaries?
- Q2.How does experience level affect salary?
- Q3.Which countries and remote work models provide better opportunities?

6.Proposed Tool Stack

Python (pandas), matplotlib, seaborn, Google Colab, Looker Studio/Tableau Public,ChatGPT,Visual Studio Code

7.Expected Capstone Output

The final dashboard will identify high-demand roles and salary trends across the technology sector. It will provide recommendations that can help students and professionals prioritize skills and career choices.
